PROFILE

A highly organized and hard-working individual looking for a challenging role in a reputable organization to utilize my technical, and management skills for the growth of the organization as well as to enhance my knowledge about new and emerging trends in the IT sector.

EDUCATION

2016 ➜ 2020
CCTT

Bachelor's of networking and communication

WORK EXPERIENCE

2020 ➜ 2020
Graduation Project
Network student

Completion of the graduation project in Hatif Libya Company (Implementation of Pfsense Firewall Solution as Protection of network).

02-2018 ➜ 06-2018
Create a network
Network student

Create a small network using 3 routers, to test acls, define networks using OSPF, and PING to make sure the network works properly.

10-2018 ➜ 12-2018
Create a VOIP Network
Network student

Connect all devices, make configurations for the Voice over Internet network in the router and switch, give numbers to the phones that we used, and make sure they are connected to each other.

03-2021 ➜ present
ISP Company
Network Engineer-->Technical Manager

Network monitor and technical support services.
Continuously monitor the network and report when a problem or outage occurs via E-mail.
Providing customers with Internet service via HLC Company's fiber optic cables and also via antennas.
Providing equipment proposals required for commercial management according to customer requirements.
Installing Windows Server on a real server, configuring a domain, adding users, giving them specific permissions, and controlling them.
Configure network routers, switches, and access points (Mikrotik, Ubiquiti, Unifi, and other brands).
Configuration for tower equipment (Sectores and links PTP).
Planning, proposing, and preparing a complete map of the internal networks of new companies and institutions after the Site Survey
Download and install the network monitoring system (PRTG and Zabbix) on the company's server.
Configure an FTP server on Ubuntu Server V20.04 and make it receive a backup copy of all network devices every week and also send it via email.
Configuration the Syslog server and make it send all the warnings and important Logs ("like:-Port down") that a network administrator should know about.
Scanning for vulnerabilities in the network and trying to address them before a problem occurs, using the Nessus program installed on Kali Linux.
